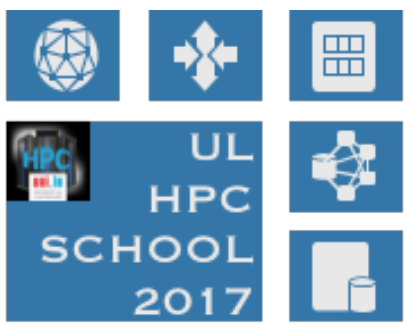
UL HPC School: http://hpc.uni.lu/hpc-school/

PS8 tutorial sources: https://github.com/ULHPC/tutorials/tree/devel/advanced/MATLAB1



# Summary

1 Pre-requisites

2 Objectives

3 Example 1

4 Example 2

5 Practical session

6 Conclusion

# Tutorial files

Sample MATLAB scripts used in the tutorial

- download only the scripts:

```
(frontend)$> mkdir $HOME/matlab-tutorial
(frontend)$> cd $HOME/matlab-tutorial
(frontend)$> wget
https://raw.github.com/ULHPC/tutorials/devel/advanced/MATLAB1/code/example1.m
(frontend)$> wget
https://raw.github.com/ULHPC/tutorials/devel/advanced/MATLAB1/code/example2.m
(frontend)$> wget
https://raw.github.com/ULHPC/tutorials/devel/advanced/MATLAB1/code/google_finance_data.m
```

- *or* download the full repository and link to the MATLAB tutorial:

```
(frontend)$> git clone https://github.com/ULHPC/tutorials.git
(frontend)$> ln -s tutorials/advanced/MATLAB1/ $HOME/matlab-tutorial
```

# X Window System

In order to see locally the MATLAB graphical interface, a package providing the X Window System is required:

- on OS X: **XQuartz** http://xquartz.macosforge.org/landing/
- on Windows: **VcXsrv** http://sourceforge.net/projects/vcxsrv/

Now you will be able to connect with X11 forwarding enabled:

- on Linux & OS X:

```
$> ssh access-gaia.uni.lu -X
```

- on Windows, with Putty
  Connection → SSH → X11 → **Enable X11 forwarding**

# Summary

1 Pre-requisites

2 Objectives

3 Example 1

4 Example 2

5 Practical session

6 Conclusion

# Objectives of this PS

Better understand the usage of MATLAB on the UL HPC Platform

- running in interactive mode
  - ↪ with either the full graphical or the text-mode interface
  - ↪ using the XCS portal (xcs.uni.lux)

# Objectives of this PS

Better understand the usage of MATLAB on the UL HPC Platform

- running in interactive mode
  - ↪ with either the full graphical or the text-mode interface
  - ↪ using the XCS portal (xcs.uni.lux)

- running in passive mode
  - ↪ several ways of submitting MATLAB jobs

# Objectives of this PS

Better understand the usage of MATLAB on the UL HPC Platform

- running in interactive mode
  - ↪ with either the full graphical or the text-mode interface
  - ↪ using the XCS portal (xcs.uni.lux)

- running in passive mode
  - ↪ several ways of submitting MATLAB jobs

- checking available toolboxes & licenses status

# Objectives of this PS

Better understand the usage of MATLAB on the UL HPC Platform

- running in interactive mode
  - ↪ with either the full graphical or the text-mode interface
  - ↪ using the XCS portal (xcs.uni.lux)
- running in passive mode
  - ↪ several ways of submitting MATLAB jobs
- checking available toolboxes & licenses status
- using script (.m) files

# Objectives of this PS

Better understand the usage of MATLAB on the UL HPC Platform

- running in interactive mode
  - ↪ with either the full graphical or the text-mode interface
  - ↪ using the XCS portal (xcs.uni.lux)
- running in passive mode
  - ↪ several ways of submitting MATLAB jobs
- checking available toolboxes & licenses status
- using script (.m) files
- plotting data, saving the plots to file

# Summary

1 Pre-requisites

2 Objectives

3 **Example 1**

4 Example 2

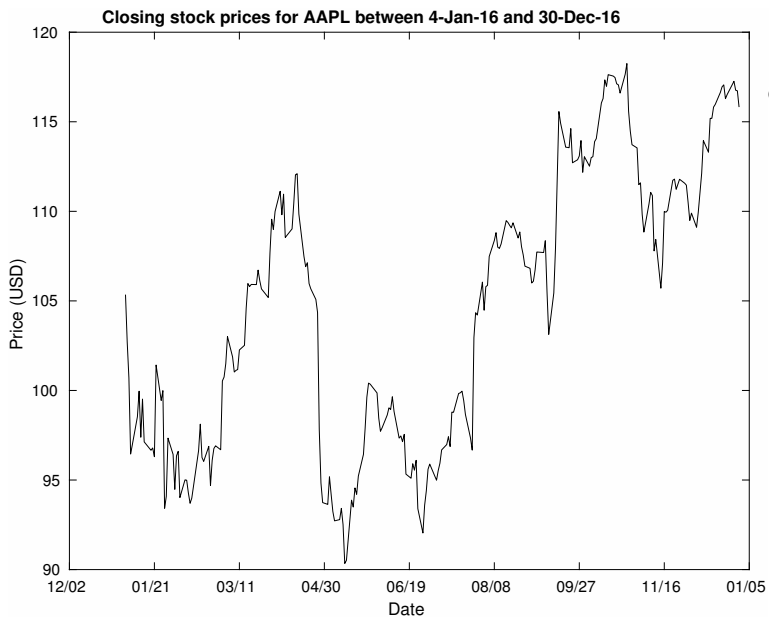
5 Practical session

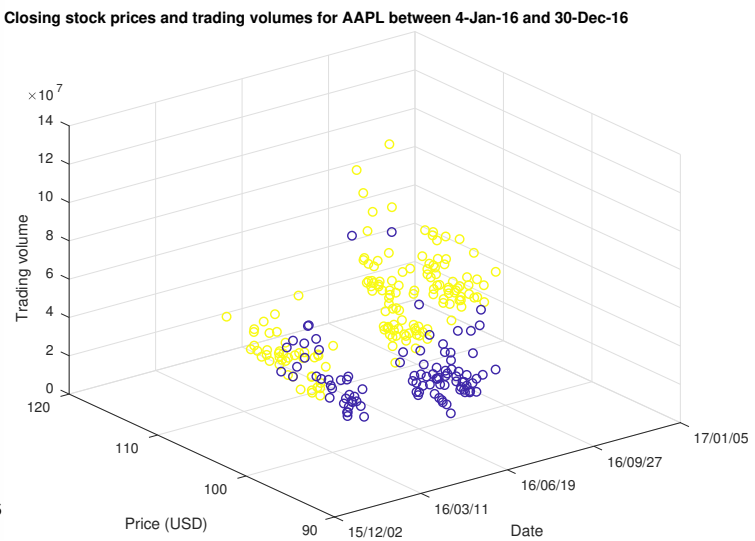
6 Conclusion

# Scripts and plots

**example1.m**: non-interactive script that shows:

- the use of a stopwatch timer
- how to use an external function (financial data retrieval)
- how to use different plotting methods
- how to export the plots in different graphic formats





# Summary

1 Pre-requisites

2 Objectives

3 Example 1

4 Example 2

5 Practical session

6 Conclusion

# Parallelization

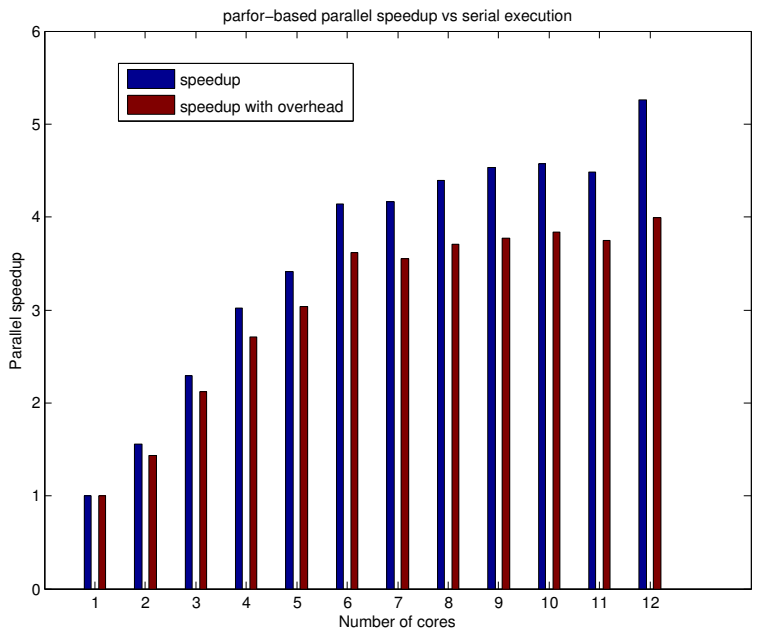
**example2.m**: non-interactive script that shows:

- the serial execution of time consuming operations

# Parallelization

**example2.m**: non-interactive script that shows:

- the serial execution of time consuming operations
- Revisited in MATLAB2 tutorial:
  - ↪ the parallel execution and relative speedup vs serial execution
  - ↪ setting the # of parallel threads through environment variables
  - ↪ GPU-based parallel execution



# Summary

1 Pre-requisites

2 Objectives

3 Example 1

4 Example 2

5 **Practical session**

6 Conclusion

# Exercises

- Read and understand the MATLAB tutorial

  https://github.com/ULHPC/tutorials/tree/devel/advanced/MATLAB1
  ↪ all provided scripts are fully commented

- Run all the examples
  ↪ launching interactive/passive mode MATLAB
  ↪ plotting script
  ↪ parallel execution script

# Useful links

- Getting Started with Parallel Computing Toolbox

  http://nl.mathworks.com/help/distcomp/getting-started-with-parallel-computing-toolbox.html

- Parallel for-Loops (parfor) documentation

  https://nl.mathworks.com/help/distcomp/parfor.html

- GPU Computing documentation

  https://nl.mathworks.com/discovery/matlab-gpu.html

# Summary

1 Pre-requisites

2 Objectives

3 Example 1

4 Example 2

5 Practical session

6 Conclusion

# What we've seen so far

- MATLAB execution modes on the UL HPC Platform
- Checking for available toolboxes and licenses
- Plotting

## Perspectives

- Personalize the UL HPC launchers with the MATLAB commands
- Check the second example M-file for insight into basic parallel execution
- Parallelize your own tasks using parfor/GPU-enabled instructions
