Summary

- Introduction
- 2 Python for [Fast] Scientific Prototyping
- 3 Using Python on UL HPC Clusters

Main Objectives of this Session

- Run Python code on the cluster
- Install and use your own Python packages
- Create a virtual environment to use several version of the same package
- Compile your code in C to have better performances
- Use **Scoop** to distribute your code on the cluster

Summary

- Introduction
- 2 Python for [Fast] Scientific Prototyping
- 3 Using Python on UL HPC Clusters

Python for [Fast] Scientific Prototyping

Python / Pip

- pip: Python package manager
 - → "nice" python packages: mkdocs...

\$> pip install <package>

install <package>

Python for [Fast] Scientific Prototyping

Python / Pip

- pip: Python package manager
 - → "nice" python packages: mkdocs...
 - → Windows: install via Chocolatey
 - \$> pip install <package>

install <package>

\$> pip install -U pip

upgrade on Linux/Mac OS

Python for [Fast] Scientific Prototyping

Python / Pip

- pip: Python package manager

 - → Windows: install via Chocolatey
 - \$> pip install <package>

install <package>

\$> pip install -U pip

- # upgrade on Linux/Mac OS
- Dump python environment to a requirements file
 - \$> pip freeze -l > requirements.txt

as Ruby Gemfiles

Pyenv / VirtualEnv / Autoenv

- pyenv: ≃ RVM/rbenv for Python
- virtualenv ≃ RVM Gemset
- (optional) autoenv
 - → Directory-based shell environments
 - \hookrightarrow easy config through .env file. Ex:

```
Primary and Section 1 Sect
```

```
# (rootdir)/.env : autoenv configuration file
pyversion='head .python-version'
pvenv='head .python-virtualenv'

pyenv virtualenv --force --quiet ${pyversion} ${pvenv}-${pyversion}
# activate it
pyenv activate ${pvenv}-${pyversion}
```

Using Python on UL HPC Clusters

Summary

- Introduction
- 2 Python for [Fast] Scientific Prototyping
- 3 Using Python on UL HPC Clusters

Virtualenv

- Install virtualenv on the cluster using pip
- Create your own virtual environment to install packages inside it

Use several version of Python

There are **several versions** of Python available on the cluster.

They have been build against **several toolchains**.

The goal of this part is to compare the different versions available on the cluster.

Scoop / Cython

Optimize your code for execution on the HPC cluster

- parallelisation using Scoop
- compile your Python code in C for faster execution with Pythran or Cython
- use Numpy package to optimize your code
